

BEGINNER FRIENDLY

Find fresh jobs. Tailor your resume.

A plain-language guide to Job Hunter, with copy and paste prompts for every step, from your first chat to your finished resumes.

For first-time users · Windows and Mac · Works inside Hermes AI

WELCOME

Meet Job Hunter

Job Hunter does the slow parts of a job search for you, so you can spend your time on the parts that matter.

Job Hunter lives inside **Hermes AI**, the chat app. You talk to it like you'd talk to a helpful assistant. You tell it what kind of job you want, and it goes looking.

What Job Hunter does for you

1

It finds fresh jobs

It checks the career pages of real companies and keeps only jobs posted in the last 3 days. No stale listings.

2

It matches them to you

It reads your resume and gives every job a match score from 0 to 100, with a short note on why.

3

It tailors your resume

For the jobs you pick, it makes a new resume PDF that puts your most relevant experience first.

4

It shows it all on a dashboard

A simple web page on your own computer lists every job, its score, and a link to your tailored resume.

WHAT IT NEVER DOES

Job Hunter never applies for you. It never sends emails, writes cover letters, or contacts anyone. You stay in charge of every application.

How to use this guide

Anywhere you see a peach box like the one below, you can copy the text and paste it straight into your Job Hunter chat. Change the parts that are about you, like a file path or a company name.

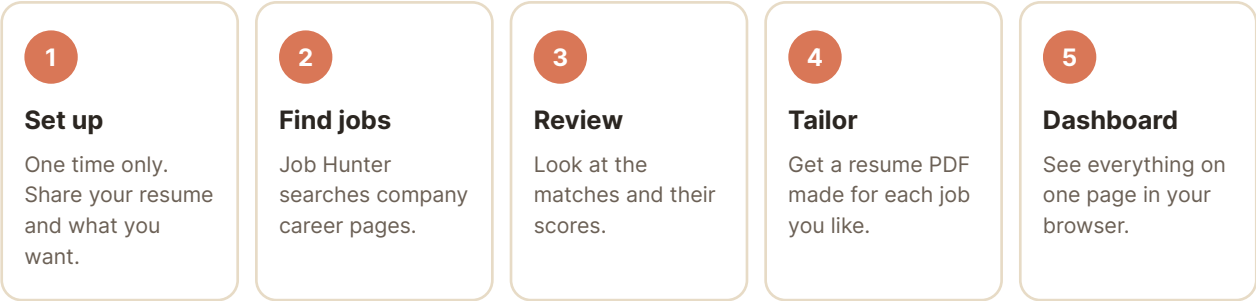

COPY AND PASTE THIS

Find jobs for me.

THE BIG PICTURE

How it all fits together

Five steps. You do the first one once, and then you repeat the middle three whenever you want fresh jobs.

Three ideas worth knowing

- **A run** is one search. Every time you say “Find jobs,” Job Hunter starts a new run for each role you're looking for.
- **Fresh** means posted in the last 3 days. Older jobs are left out on purpose, because the newest listings get the most attention.
- **Career pages first.** Jobs come straight from the company's own website, not from job boards like LinkedIn or Indeed. That way the listing is real and still open.

Before you start

You need	How to check
Hermes AI installed	You can open the Hermes app, or type <code>hermes</code> in a terminal without an error.
The installer has run	You double-clicked <code>install.bat</code> on Windows or <code>install.command</code> on a Mac, and it finished without errors.
Your resume as a PDF	Exported from Word or Google Docs, so you can select the text. A photo or scan won't work.
Chrome or Edge on your computer	Job Hunter uses one of them quietly in the background to make your resume PDFs.

TIP

If the installer tells you something is missing, follow its message and run it again. It's safe to run as many times as you like. It only fills in what's missing and never touches your resume or your results.

GETTING STARTED

Open your Job Hunter chat

Job Hunter is a separate profile inside Hermes. You need to be in that profile for everything in this guide to work.

In the Hermes app

Open Hermes and switch to the profile called **job-hunter**, then start a new chat.

Or from a terminal

Open a terminal, type this, and press Enter:

```
hermes -p job-hunter chat
```

IF YOU SEE AN INFERENCE ERROR

If the chat says no inference provider is configured, type `/model` in the chat and pick any model on the list. Free models work fine. Then try again.

STEP 1

Your first chat: setup

The first time you chat, Job Hunter walks you through setup before it does anything else. It takes about five minutes, and you only do it once.

Job Hunter asks one question at a time. It will ask for:

- your **resume as a PDF**
- a few **details employers' systems need**: your phone number with the country code, your city and country, and the month you started and finished each job
- the **job titles** you want (one to three)
- your **level**, like entry level or senior
- where you want to work, like **remote** or a city
- the **companies** you'd like to check, with their careers page links
- how many **days back** to look. The default is 3.

Start by just saying hello:

COPY AND PASTE THIS

Hi. I'm new here. Let's set up Job Hunter.

When it asks for your resume, give it the full path to the file. On Windows, hold Shift, right-click the file, choose **Copy as path**, and paste it. On a Mac, hold Option, right-click the file, and choose **Copy as Pathname**. It's fine if the path comes with quote marks around it.

COPY AND PASTE THIS

My resume is at C:\Users\Sam\Documents\Sam-Resume.pdf

Windows example. Use your own path.

My resume is at /Users/sam/Documents/Sam-Resume.pdf

Mac example. Use your own path.

Then answer its questions in your own words. Here are some examples:

EXAMPLE ANSWERS

My phone number is +234 801 234 5678.

Include the country code, the part after the plus sign.

I started at Acme in March 2023 and I still work there.

Give the month for each job it asks about.

I want to search for Data Analyst and Business Analyst roles.

I'm at entry level, and I'd like remote jobs anywhere in the world.

My target companies are Stripe (<https://stripe.com/jobs>) and Shopify (<https://www.shopify.com/careers>).

I don't know which companies to pick. Can you suggest some?

Job Hunter will find companies hiring for your roles and check their career pages first.

Three days is fine.

WHY IT ASKS FOR A PHONE NUMBER AND DATES

Most employers run resumes through software called an applicant tracking system, or ATS, before a person reads them. That software needs a phone number it can dial from abroad and a month for every job. If your resume is missing them, Job Hunter asks once, saves your answers on your computer, and never guesses.

SETUP COMES FIRST

Until setup is finished, Job Hunter won't search for jobs or tailor resumes. It will keep bringing you back to the setup questions. That's on purpose, so your results are always based on your real resume.

STEP 2

Find jobs

This is the main event. One sentence starts a full search.

COPY AND PASTE THIS**Find jobs for me.**

Searches for every role you saved during setup.

Find jobs for Data Analyst only.

Searches for just one role.

Find jobs for Product Analyst, junior level, remote in Europe.

Overrides your saved settings for this one search.

What happens while it works

1

It reads your resume

So it knows your skills and experience.

2

It visits company career pages

Your target companies first. If those don't turn up much, it checks other companies' own career pages too.

3

It checks the date

Only jobs posted in the last 3 days are kept. Anything older is left out.

4

It scores each match

From 0 to 100, with a short reason for the score.

A search can take several minutes. You'll see it working through each company. When it's done, it tells you how many jobs it found.

Reading a match score

Score	What it means
85 to 100	A strong match. Your resume lines up well with what they want.
70 to 84	A good match. Worth a closer look.

Score	What it means
55 to 69	A stretch. You have some of what they want, but there are gaps.
Under 55	A weak match. Probably skip it.

DATE UNKNOWN

Some career pages don't show when a job was posted. Job Hunter still keeps those jobs, but marks them **date unknown** so you can check the posting yourself before you spend time on it.

STEP 3

See what it found

You can ask about your results in plain English, any time.

COPY AND PASTE THIS

Show me the latest run and the jobs it found.

Which three jobs match me best?

Why did you rate job 4 so low?

Show me only the jobs posted today.

Why didn't I get any new jobs?

Each job has a number, like job 4. You'll use that number when you ask for a tailored resume. You'll see the numbers in the chat and on the dashboard.

NO NEW JOBS?

That's normal some days. Only the last 3 days count, and not every company posts every day. You can ask Job Hunter to look back 5 or 7 days, or add more companies to your list. Both are covered in "Everyday changes" later in this guide.

STEP 4

Tailor your resume

Pick the jobs you like, and Job Hunter makes an ATS-friendly resume PDF for each one.

COPY AND PASTE THIS

- Tailor my resume for every job in the latest run.
- Tailor my resume for job 3 only.
- Tailor my resume for jobs with a match score of 75 or higher.

What “tailored” means

Job Hunter re-orders and re-words what's already on your resume so the most relevant experience comes first, and it uses the same keywords the job posting uses. It never makes anything up. It won't add skills, jobs, dates, or numbers you don't have. If it needs a detail, like a start month, it asks you first.

Built to pass an ATS

Every resume uses the same plain, professional layout on purpose. Fancy designs look nice to people, but the software that screens resumes can scramble them.

What Job Hunter does	Why it matters
One column, standard font (Arial)	The software reads top to bottom. Columns get mixed up.
Standard headings like Experience and Skills	The software looks for those exact words.
No photos, icons, tables or text boxes	The software skips or scrambles them.
Dates and company on one line	Keeps each date attached to the right job.
Your contact details in the main text	Some systems ignore page headers and footers.
One page, two at most	What recruiters expect.

After it makes each resume, Job Hunter reads the PDF back the way an ATS would and fixes anything that looks wrong. It also tells you which of the job's key words your resume doesn't include. If a word isn't there, it's because you don't have that experience, and it won't add it.

Where your new resumes are

Each one is saved as a PDF in its own folder inside the `jobs` folder of your Job Hunter project, named with the job number and company:

```
jobs/3-northwind-automation/resume.pdf
```

You can also open each resume with the **PDF** link on the dashboard.

READ BEFORE YOU SEND

Always read a tailored resume yourself before you use it. Job Hunter is careful, but you're the one applying, so you should be sure every line is true and reads the way you want.

STEP 5

The dashboard

A web page, on your own computer, that shows all your results in one place.

COPY AND PASTE THIS

Start the dashboard.

Starts it and gives you the link.

Start the dashboard and open it in my browser.

Is the dashboard running?

Stop the dashboard.

Switches it off when you're finished.

The dashboard lives at **`http://127.0.0.1:5301/`**. That address only works on your own computer, so nobody else can see it.

What you'll see

- **Summary tiles.** Across the top: how many searches, jobs, and tailored resumes you have, and when the latest search ran.

- **Runs.** Each search is a card. The newest one opens by itself. Click a card to open or close it.
- **Progress line.** Shows how far a search got, from Started to Presented. If a search failed or found nothing, the reason appears here.
- **The jobs table.** Company, title, location, when it was posted, match score, and status. Buttons above it let you show only tailored jobs, jobs with an unknown date, or skipped ones.
- **Resume link.** Click **PDF** to open the tailored resume for that job.
- **Posting link.** Click **Posting** to open the original job on the company's website.
- **Timeline.** A short log of what happened during the run.

The page refreshes itself every 15 seconds, so you can leave it open while a search runs.

It fits any window size. If you make the browser window narrow, the table turns into easy-to-tap cards, like on a phone. It also switches between a light and a dark look to match your computer. The round button at the top right lets you choose one yourself.

LOOK, DON'T TOUCH

The dashboard is view-only. It has no buttons that change anything. To search or tailor, talk to Job Hunter in the chat.

EVERYDAY CHANGES

Change anything, just by asking

Your settings aren't locked in. You can change them whenever you like.

COPY AND PASTE ANY OF THESE

.....
Show me my target companies.
.....

.....
Add Notion to my target companies. Their careers page is <https://www.notion.so/careers>.
.....

.....
Remove Shopify from my target companies.
.....

.....
Show me my current search settings.
.....

.....
Change my roles to Data Analyst and Data Engineer.
.....

.....
Change my location to remote in Africa.
.....

.....
Change my search to jobs from the last 5 days.
.....

Widens the freshness window from the default of 3 days.
.....

.....
I have a new resume. It's at C:\Users\Sam\Documents\Sam-Resume-2026.pdf
.....

Replaces your saved resume.

A QUICK CHECK

After you change something, ask "Show me my current search settings." to see exactly what Job Hunter will use next time.

OPTIONAL

A daily search on autopilot

Job Hunter can run a search for you every morning at 8:00. It's switched off until you turn it on.

COPY AND PASTE THIS

Is my daily job search turned on?

Turn on my daily job search.

Turn off my daily job search.

Will my daily search actually run? Check for me.

Checks that the Hermes background service is running.

A few things to know:

- The automatic search only **finds** jobs. To get tailored resumes, ask for them in the chat, like in Step 4.
- It runs only while Hermes's background service (called the gateway) is running. If it isn't, Job Hunter will tell you how to start it.
- Setup has to be finished first. If it isn't, the daily search does nothing.

REFERENCE

Where your files live

Everything is in your Job Hunter project folder. You rarely need to open any of it, but it helps to know.

What	Where
Your resume	<code>resume-library/resume.pdf</code>
Details for ATS (phone, location, job months)	<code>resume-library/ats-profile.md</code>
Tailored resumes	<code>jobs/</code> folder, one subfolder per job, each with a <code>resume.pdf</code>
What you're searching for	<code>config/search-config.md</code>
Your target companies	<code>config/target-companies.md</code>
Resume wording preferences (optional)	<code>config/author-profile.md</code>
All your results	<code>data/job-hunter.db</code> (the dashboard reads this)
This guide	<code>docs/Job-Hunter-User-Guide.pdf</code>

PRIVATE BY DESIGN

Your resume, tailored resumes, and results stay on your computer. They're kept out of the project's shared code, so they can't be uploaded by accident.

Words you'll see

Word	What it means
Run	One search for one role.
Match score	How well a job fits your resume, from 0 to 100.
Fresh	Posted within the last 3 days (you can change this).
Date unknown	The career page didn't show a posting date.

Word	What it means
Tailored resume	A copy of your resume, re-ordered for one specific job.
ATS	Applicant tracking system. Software employers use to screen resumes before a person reads them.
Career page	The jobs page on a company's own website.
Profile	A separate workspace inside Hermes. Yours is called job-hunter.
Setup (onboarding)	The first-chat questions that teach Job Hunter about you.
Gateway	Hermes's background service. It's what lets the daily search run by itself.

HELP

If something goes wrong

Most problems have a quick fix.

What you see	What to do
An "inference" or "no provider" error	Type <code>/model</code> in the chat and pick any model. Free ones work.
It keeps asking you to finish setup	Answer the setup questions. It needs a resume PDF it can read, your roles, and at least a few companies.
It can't read your resume	Use a PDF exported from Word or Google Docs, not a scan or a photo. If you're not sure, open the PDF and try to select a line of text.
No jobs found	Only the last 3 days count. Ask it to look back 5 or 7 days, or add more companies.
It asks for your phone number, dates or location	Those are what employers' ATS software needs. Answer once and Job Hunter remembers. It never guesses these.
A company's link doesn't work	Say: "Replace the careers link for Stripe with https://stripe.com/jobs " using the right company and link.

What you see	What to do
The dashboard won't open	Say "Stop the dashboard." and then "Start the dashboard." If it still won't open, another program may be using port 5301.
It can't make your resume PDFs	Install Google Chrome or Microsoft Edge, then run the installer again.
Hermes isn't found	Install Hermes AI first, then run the installer again.
You ask for a cover letter or want it to apply	Job Hunter doesn't do that, on purpose. It finds jobs and tailors resumes, and the rest is up to you.

CHEAT SHEET

Every prompt in one place

Keep this page handy. Copy any line into your Job Hunter chat.

SET UP AND SEARCH

Hi. I'm new here. Let's set up Job Hunter.

Find jobs for me.

Find jobs for Data Analyst only.

REVIEW AND TAILOR

Show me the latest run and the jobs it found.

Which three jobs match me best?

Tailor my resume for every job in the latest run.

Tailor my resume for job 3 only.

Check my resume for ATS problems.

DASHBOARD

Start the dashboard and open it in my browser.

Is the dashboard running?

Stop the dashboard.

CHANGE SETTINGS

Show me my target companies.

Add Notion to my target companies. Their careers page is <https://www.notion.so/careers>.

Change my roles to Data Analyst and Data Engineer.

Change my search to jobs from the last 5 days.

DAILY SEARCH

Turn on my daily job search.

Turn off my daily job search.
